PHARMACY

Doctoral Theses

272. PARIDHAVI (M)
Pharmacognostical, Phytochemical and Pharmacological Studies of Zuroor-E-Qula : An Unani Polyherbal Formulation.
Supervisor : Prof. Shyam S Agrawal
Th 14276

Abstract

The role of tannins (polyphenols), flavonoids, fixed and volatile oils phytoconstituents in the protection of healing of gastric mucosal damage has been enlightened in the review of literature. The effect of formulation (Zuroor-e-Qula) on gastric mucosal system has not been documented in anywhere including alternative systems of medicine. Hence in the present studies, the protective and curative effect of Zuroor-e-Qula on gastric mucosal damage was also investigated and ultra structural observations were done by scanning electron microscopy. Therefore, the protective or curative effects of this formulation on gastric mucosal damage are entirely a new finding, which does not appear in the national formulary of unani medicine.

Contents

1. Introduction.
2. Review of Literature.
3. Research Envisaged.
4. Materials & Methods.
5. Observation and Results.
6. Discussion.
7. Conclusion. Bibliography.
